I've given the document "Proposed Work Plan for Phase II Site Investigation-Carus Chemical Company Manufacturing Facility" a cursory review. This site is, at present, a state-site project and not subject to the same bias as superfund sites. As there was not a clearly defined purpose for the review, these comments may or may not be applicable. That being said, my comments for the work plan follow.

## WORK PLAN

1. Page 23, Section 4.6. Will TCLP analysis be run also?
2. Page 31, Section 4.9. Why is there a blanket assumption that there will be no RCRA hazardous waste?
3. Where is the site history in the workplan? This should be included so those conducting the RI can properly map out strategies for their investigation.
